

NITIN JADON

Senior Backend Engineer | Java · Spring Boot · AWS · Kubernetes
+91-7906791013 · nitin.jadon.35@gmail.com · [LinkedIn](#) · Aligarh, India

PROFILE

Senior Backend Engineer with 7+ years designing and scaling high throughput microservices across e-commerce, healthcare, and enterprise networking domains. Deep expertise in Java, Spring Boot, and cloud-native AWS ecosystems (EKS, ECS, Lambda). Proven track record delivering resilient event-driven architectures with Kafka, modernizing CI/CD pipelines (Jenkins, CircleCI, Drone), and establishing observability platforms (New Relic, Splunk) that reduce MTTR. Currently integrating AI tooling (GitHub Copilot, Claude) into daily development workflows to accelerate delivery velocity.

WORK EXPERIENCE

Senior Software Engineer | TEKsystems India (via ESS Commerce)

Oct 2021 – Present *India · Remote*

ESL — Abbott Healthcare Platform *Oct 2025 – Present*

- Architected and maintained highly available API and Kafka queue-listener services on AWS EKS, ensuring sub-100ms async communication latency across enterprise healthcare systems.
- Led integration of core Enterprise modules with SFDC and OneTrust, building secure, scalable application flows that achieved 99.9% uptime SLA.

VIPMP — Adobe E-Commerce Platform *Aug 2024 – Oct 2025*

- Led modernization of core e-commerce microservices, delivering 15+ feature enhancements and resolving 40+ critical bugs, directly improving end-user conversion rates.
- Built custom New Relic dashboards enabling proactive anomaly detection; reduced mean incident response time by ~35% and achieved zero critical security audit findings.

CX Cloud Agent — Cisco Networking *Oct 2021 – Aug 2024*

- Engineered and deployed highly scalable microservices from the ground up using a polyglot stack (Java, Python, Golang) across AWS ECS, EKS, and Lambda serverless architectures.
- Delivered event-driven pipeline components processing millions of network telemetry events daily with fault-tolerant Kafka consumers and DLQ strategies.

Associate Consultant | Capgemini India — State Farm Client

May 2019 – Oct 2021 *Pune, India*

- Engineered a predictive Java application integrated with ServiceNow APIs to autonomously resolve recurring proactive tickets and forecast system outages — reducing manual ticket resolution effort by ~60%.
- Built a scheduled Splunk log-extraction and reporting engine delivering automated error-rate insights multiple times daily, eliminating manual log-triage overhead for the ops team.
- Led end-to-end delivery of a 24/7 breach-reporting tool with a custom front-end, integrating Service Manager with MS Excel for continuous hourly SLA monitoring across critical systems.

TECHNICAL SKILLS

Languages	Java (primary), Python, Golang
Frameworks	Spring Boot, Spring Cloud, Microservices, RESTful APIs, Event-Driven Architecture
Cloud & Infra	AWS (EKS, ECS, Lambda, S3, RDS, SQS, EventBridge, CloudWatch, CloudFront, API Gateway), Kubernetes, Docker, Terraform
Messaging & DB	Apache Kafka, PostgreSQL, MySQL, Redis, NoSQL (DynamoDB)
CI/CD & DevOps	Jenkins, CircleCI, Drone, GitHub Actions, Bitbucket Pipelines
Observability	New Relic, Splunk, Datadog

AI & Dev Tools GitHub Copilot, Claude AI, Cursor, IntelliJ IDEA, VS Code
Integrations Salesforce (SFDC), OneTrust, ServiceNow, MS Excel APIs

EDUCATION & CERTIFICATIONS

B.Tech, Computer Science & Engineering — GLA University, Mathura	Aug 2015 – May 2019
Microsoft Technology Associate (MTA) Certification — Java Applications Development, Morling Global	Jun 2017 – Jul 2017
AWS AI Practitioner — <i>In progress (target: Q3 2026)</i>	2026
